

PRACTICAL 15:

Design MVC Based Web Application to Display Employee Details

Step 1: Create MVC Project

1. Open Visual Studio
2. File → New → Project
3. Select:

ASP.NET Web Application (.NET Framework)

4. Click OK
5. Select: Empty
 - ✓ MVC checkbox
6. Click Create

Step 2: Create Model

1. Right click Models folder
2. Add → Class
3. Name:

Employee.cs

Step 3: Write Model Code

```
using System;  
using System.Collections.Generic;  
using System.Linq;
```

```

using System.Web;

namespace MVCView.Models
{
    public class Employee
    {
        public int eid { get; set; }
        public string ename { get; set; }
        public string department { get; set; }
        public int salary { get; set; }
    }
}

```

Step 4: Create Controller

1. Right click Controllers
2. Add → Controller
3. Select: MVC 5 Empty Controller
4. Click Add

Controller Name:

EmployeeController

Step 5: Write Controller Code\

```

using System;
using System.Collections.Generic;
using System.Linq;
using System.Web;
using System.Web.Mvc;

```

```

using MVCView.Models;

namespace MVCView.Controllers
{
    public class EmployeeController : Controller
    {
        public ActionResult Index()
        {
            Employee emp = new Employee();
            emp.eid = 101;
            emp.ename = "Amna";
            emp.department = "IT";
            emp.salary = 50000;
            return View(emp);
        }
    }
}

```

Step 6: Create View

1. Right click inside: return View(emp);
2. Click: Add View

3. View Name: Index
4. Template: Empty
5. Select Model Class: Employee
6. Click Add

Add View

View name:
Index

Template:
Empty

Model class:
Employee (MVCView.Models)

Options:

☐ Create as a partial view

☒ Reference script libraries

☒ Use a layout page:
...

(Leave empty if it is set in a Razor _viewstart file)

Add
Cancel

Step 7: Write View Code

```
@model MVCView.Models.Employee
```

```
@{
    ViewBag.Title = "Index";
}
```

```
<h2>Employee Details</h2>
```

```
<table border="1">
```

```
    <tr>
        <td>Employee ID</td>
        <td>@Model.eid</td>
    </tr>
```

```
    <tr>
        <td>Employee Name</td>
        <td>@Model.ename</td>
    </tr>
```

```
    <tr>
        <td>Department</td>
        <td>@Model.department</td>
    </tr>
```

```
    <tr>
        <td>Salary</td>
        <td>@Model.salary</td>
    </tr>
```

```
</table>
```

Step 8: Run Project

1. Press F5
2. Open:

<https://localhost:xxxx/Employee>

— [Application name](#)

Employee Details

Employee ID	101
Employee Name	Amna
Department	IT
Salary	50000
